EK AUTOMATION SYSTEM SOLUTIONS

EK INTEGRATION™

As a Siemens Solution Partner, we are your single source expert for a complete TALON open protocol control system. Our EK INTEGRATION system is web-based and powered by the Tridium Niagara Framework. TALON is able to seamlessly link BACnet, LonTalk, Modbus and other common open protocol devices into a single, robust control system. Non-proprietary and completely expandable to include HVAC, lighting, security and fire life safety. You'll control everything through a single workstation featuring an elegant but robust user interface. You'll also be able to access your system from anywhere with TALON web technology.

EK MOBILIZATION™

Our EK MOBILIZATION solution, expands the building automation user experience to a whole new level. With the every growing demand of smart phones and smart tablets in the work environment, our MOBILIZATION solution brings your building's automation system to the computing device you use most. Built on the same Siemens Talon platform as our EK AUTOMATION solution, EK MOBILIZATION includes our Fluid Integration software providing 3D imaging and smart phone and tablet apps for more enhanced experience, accessibility and convenience. Login into your building automation where ever you are.

EK VERIFICATION™

Having the ability to control your building's HVAC & Lighting is not just a luxury any more, its a necessity. Any money saved in energy consumption goes right to the bottom line. So what if you could not only control when your building systems operate, but have the ability to watch in "real time" the energy consumption and savings right on your desktop? With our EK VERIFICATION solution you won't have to wait on the utility bill to determine results. Our EK INTEGRATION system plus VERIFICATION offers real time energy dashboards, energy trending, tenant metering, weather data, live measurement & verification and more.
